Cleanable Filters Introduced

A new series of in-line filters from Industrial Specialties Mfg. allow filters to be quickly and easily inspected and cleaned without disturbing the tubing connections.

By loosening the threaded collar on the filter housing, the filter insert can be cleaned while remaining connected to the tubing. This saves the time and expense of disassembling the tubing and replacing the filter.

Three micron ratings are available and color-coded threaded collars can be supplied to identify the filter's micron. The 65u is a white nylon element, 149u is a red nylon element and 250u is a green nylon element. All filter screens are polyester.

The filter housing is constructed of durable, opaque Nylon material with a 3/8" beaded barb. Special end configurations are also available.
