Fittings With Integrated Filters Reduces Component Requirements

A new line of fittings with integrated filters for air, vacuum or liquid service applications has been introduced by Industrial Specialties Mfg., Inc.

These miniature fitting/filter combinations offer the engineer an option to select one miniature fitting that also includes an in line filter, allowing the reduction of system components. These fittings are available in straight, elbow, tee or coupling configurations.

Standard products are equipped with 43 micron nylon filtration and nylon bodies. Optional materials and colors are available.

Detailed product literature and free samples are available upon request.
